Patent

## **Amendment To The Claims**

Please amend the claims as shown:

21

1. (currently amended) A method for a user for <u>authorizing accounting for</u> and providing evidence of payment of postage <u>for a mail piece</u> comprising:

obtaining a registered digital pen meter registered to the user, wherein the digital pen meter has been registered with a postal authority;

handwriting a return address field on a mail piece;

handwriting a destination address field on a mail piece;

handwriting a mail piece identifier on the mail piece;

handwriting a postage value field on the mail piece;

then facilitating the transfer of digital pen data to a server by selecting a class of service by selecting a class of service box on the mail piece; and then placing the mail piece in the mail stream.

- 2. 5. (canceled).
- 6. (original) The method of claim 1 further comprising:obtaining biometric data relating to the pen strokes of the user.
- 7. (original) The method of claim 1 further comprising: obtaining a postage value indicator written in a postal value field.
- 8. (original) The method of claim 1 wherein:
  the mail piece identifier comprises data obtained from a destination address field.
  - 9. (original) The method of claim 8 wherein:

Patent

the mail piece identifier comprises a graphical image representation of the destination address field.

10. (original) The method of claim 8 wherein:

the mail piece identifier comprises data obtained from at least one pen stroke captured from writing on the mail piece.

11. (original) The method of claim 8 wherein:

the mall piece identifier comprises pen stroke data captured from the destination address field and is stored to be matched with a scan of the destination address field.

12. (currently amended) A method for verifying payment of postage <u>for a mail</u> <u>piece processed in a mail stream</u> comprising:

obtaining digital pen data from a user for authorizing payment of postage wherein the digital pen data includes a mail piece identifier;

creating a modified mail piece identifier using the mail piece identifier and modification data associated with the postage payment authorization;

creating a reference user profile using the modified mail piece identifier;

storing the reference user profile and associated the reference user profile
with a user identifier, the modified mail piece identifier and the mail piece identifier;

obtaining a user profile;

obtaining a processed mail piece identifier from a the mail piece;

obtaining customer data from the mail piece and determining a mail piece user identifier using the customer data;

obtaining determining a mail piece user profile for the mail piece using the processed mail identifier and the mail piece user identifier; and comparing the mail piece user profile to the user profile.

Patent

13. -15. (canceled).

16. (new) The method of claim 1 wherein: the digital pen data comprises an electronic signature card.

17. (new) The method of claim 16 wherein:

the electronic signature card includes a secure hash that includes data from the return address field.

- 18. (new) The method of claim 1 further comprising: selecting a class of service using the digital pen meter.
- (new) The method of claim 1 further comprising:
   providing account selection data by handwriting the return address field.
- 20. (new) The method of claim 12 wherein: the modification data includes time stamp information associated with the postage authorization request.
  - 21. (new) The method of claim 12 wherein:

the modification data is selected from the group consisting of user biometric data, user identifier, digital pen meter identifier and a time stamp associated with the postage payment authorization.

- 22. (new) The method of claim 12 wherein: the modification data includes the user identifier.
- 23. (new) The method of claim 12 further comprising:

Patent

storing a mail piece processed record for the mail piece including the mail piece identifier and the user identifier;

processing at least one additional mail piece to determine a second mail piece processed record including a second mail piece identifier and a second user identifier;

comparing the mail piece processed record and the second mail piece processed record.

24. (new) A method for verifying payment of postage comprising:

obtaining a mail piece identification image from a user as the user writes a destination address with a digital pen, wherein the digital pen is associated with a digital pen identifier that is associated with a user identifier;

storing the mail piece identification image in a record associated with the use, wherein the record is stored in a database having a plurality of records;

obtaining a processed mail piece identification image from a processed mail piece;

searching the database using the processed mail piece identification image using an image best fit search.

25. (new) The method of claim 24 wherein:

the mail piece identification image is associated with the user using a the user identifier.

26. (new) The method of claim 24 wherein:

the mail piece identification image is associated with the user using a the digital pen identifier.

27. (new) The method of claim 24 further comprising: associating the mail piece identification image with a time stamp;

 $\bigcirc \gamma$ 

Patent

associating the processed mail piece identification image with a processed image time stamp; and

comparing the time stamp with the processed image time stamp.
